(54) Title: A HOOD HAIR DRYER ATTACHMENT

Fig. 1

(57) Abstract: The invention relates to a hood hair dryer attachment (1) comprising a hood (3) for covering at least a part of a head of a user. The hood has spaced apart inner (4) and outer (2) walls defining an air channel therebetween, and the inner wall comprises a plurality of holes (13) for directing air from the air channel onto a head of a user. The hood hair dryer attachment further comprises a hose (5) connected at a first end to the outer wall of the hood and in communication with the air channel. The hose comprises a collar (6) at a second end for mounting to an air delivery conduit of a hair dryer and the collar is resiliently circumferentially expandable and comprises a friction-enhancing material exposed on an inner surface of the collar for contacting a surface of the air delivery conduit of a hair dryer.
