

What is claimed is:

1. ~~A fluid transport pipe joint comprising:~~

5 a joint body to be connected to a fluid transport pipe, the joint body including a cylindrical connecting portion projecting from the joint body;

10 wherein, the cylindrical connecting portion includes a fixed cylindrical member formed integrally with the joint body and a movable cylindrical member fluid-tightly connectable to the fixed cylindrical member to be pivotable three-dimensionally relative thereto. *Insert new claim 1*

15 2. A fluid transport pipe joint according to claim 1, wherein said movable cylindrical member to be connected with said fixed cylindrical member defines, in an outer peripheral face thereof, a first sliding contact face having a partially spherical shape;

20 said fixed cylindrical member defines, in an inner peripheral face thereof, a second sliding contact face having a partially spherical shape for coming into slidable contact with said first sliding contact face; and

25 stopper means is provided for preventing, through contact, inadvertent withdrawal of said movable
