METHOD AND SYSTEM IN A COMPUTER NETWORK FOR SEARCHING AND LINKING WEB SITES

ABSTRACT OF THE DISCLOSURE

A method and system of searching web sites of world wide web is provided for a user to link a web site of world wide web with the user's computer device. The method and system of the present invention allows the user to input through the computer device data which does not find its corresponding web site code in a web site database and yet to successfully link a web site of world wide web to the user's computer device by means of a search engine capable of selecting a web site code similar to the input data for linking purpose.
