

ABSTRACT

The present invention provides a slurry composition in which magnetic material powder has excellent
5 dispersibility and excellent dispersion stability and which enables production of a sheet having high surface smoothness and high adhesiveness to substrates. Provided is a slurry composition containing: a polyvinyl acetal resin; magnetic material powder; and a Na ion, the slurry
10 composition having a Na ion content of 1,000 to 3,000 $\mu\text{g/g}$ relative to the polyvinyl acetal resin.
