

Abstract

A fountain pen has a tubular barrel, an ink guide arranged in the barrel, on whose front end a nib is attached, as well as an ink reservoir in the form of an ink cartridge fitted onto the rear end of the ink guide. The ink guide is displaceable between a writing position in which its front end area projects out of the front end of the barrel, and a storage position in which the front end area of the ink guide and the nib attached to it are retracted into the barrel. The ink guide can in addition be displaced from the storage position into a replacement position in which the rear end area of the ink cartridge fitted onto the ink guide projects out of the rear end of the barrel so that the user can carry out a replacement.
