

FPC Laminating and Testing Device

Abstract

The utility model provides an FPC laminating and testing device, and the FPC Laminating test device includes mounting bracket; In the first cylinder, the first cylinder is set at the end of the fixed frame, and the first cylinder is fixed on the end of the fixed rack. Second cylinder, the second cylinder is set on the operating table and near the first cylinder; The third cylinder, it's installed in above stated on and away from the first cylinder, and it's connected to the second cylinder linkage, and the third cylinder diameter less than the second cylinder bore; The probe is set in the third cylinder, and the second cylinder is extended to the third cylinder. As well as the magnetic gate sensor, the magnetic gate sensor is connected to the probe. The FPC fitting test device of the utility model can identify whether the FPC is leaking or doubled during the laminating process.
