

METHOD FOR SUPPORTING PORT CONTROL AND DEVICE

ABSTRACT

Embodiments of this disclosure provide a method for supporting port control
5 and a device. The method includes: receiving port related control information; and
performing a port related operation on a port according to the port related control
information; where the port related control information includes at least one of the
following: a port identifier, traffic class information, first routing information,
priority regeneration related information, port transmission rate related
10 information, bandwidth availability parameter related information, and
transmission selection algorithm related information.

FIG. 3 accompanies the abstract.
