

ABSTRACT

Embodiments of the present application relate to the technical field of building materials, in particular to a preparation method of green building materials, green building materials and composite building materials containing the green building materials. Here, green building materials specifically include black soldier fly puparia and plant fibers. In the method, a technician can obtain black soldier fly puparia and plant fibers, and prepare green building materials from the black soldier fly puparia and plant fibers. The green building materials provided by the embodiment of the present application are natural organic building materials, which are healthy, environmentally friendly, safe, and can effectively reduce the carbon emission in the preparation process of building materials and save energy.
