

Abstract

The invention relates to a high-performance packaging method for packaging, in particular small-sized, products, preferably confectionary such as hard or soft caramels, pralines or similar, and a high-performance packaging device, in particular for performing the method, and a high-performance packaging machine comprising such a packaging device. According to the present invention, a plurality of product flows are guided, preferably in parallel, through a packaging device, which, at least for one product flow, preferably provides for packaging of the products pertaining to said product flow in a continuous process. The invention further relates to a corresponding packaging machine and a packaging machine arrangement having a plurality and/or packaging machine.
