

Abstract

The present application provides a HARQ-ACK codebook generating method, a HARQ-ACK codebook receiving method, an apparatus, a device, and a storage medium. The HARQ-ACK codebook generating method comprises: receiving first configuration information and second configuration information; generating, on the basis of the first configuration information and the second configuration information, a HARQ-ACK codebook for feeding back a physical downlink shared channel (PDSCH); and sending the HARQ-ACK codebook to a network device. According to the method, a HARQ-ACK codebook can be generated suitably for two configuration modes.
