USER MAINTENANCE SYSTEM AND METHOD

ABSTRACT

The present disclosure relates to a method for predicting an order value. The method includes: obtaining information, wherein the information includes a historical order; determining an attribute feature of the historical order based on the information; and predicting the order value based on the attribute feature. The present disclosure also relates to a system for predicting the order value. The system includes a receiving module and a processing module, wherein the processing module is configured to predict the order value.
