A DEVICE FOR TRANSFERRING FLUID FROM A SUPPORT AT SEA

5 The present invention relates to a device for
transferring fluid from a support (1) installed at sea
and fitted with a device (4) for storing flexible pipes
having the first ends (3-1) of a plurality of flexible
10 pipes fastened thereto, the pipes preferably extending
between said support (1) and an offloading ship (2). The
pipe device of the invention comprises a first connection
and valve device (13-1), said pipes being connected to
one another at their seconds ends (3-6) by a said first
15 connection and valve device (13-1) having n first pipe
portions and suitable for being connected to a second
connection and valve device (13-2), preferably installed
on board a said offloading ship.
