

ABSTRACT

FACADE ASSEMBLY, BUILDING STRUCTURE AND METHOD FOR MOUNTING THE FACADE ASSEMBLY

A facade assembly (14) for a building (10) comprises at least one facade element (16), which can be fastened to a wall or an inter-story ceiling (12) of the building (10), and at least one fire-protection element (18), which can be mounted between the facade element (16) and the wall or the inter-story ceiling (12). The fire-protection element (18) comprises an insulating layer (19) and an intumescent course (32), which contains an intumescent material and which passes through the insulating layer (19) at least in portions in the cross section along the facade element (16).

Furthermore, a method for mounting such a facade assembly and a building structure using the facade assembly are provided.
