

ABSTRACT

A beauty device (10) has a first electrode (111) and a second electrode (112) placed on a same surface, and a third
5 electrode (113) that is not on the same surface; a first generating means (152) that generates a DC pulse train; a second generating means (153) that generates an alternating current; and a control means (151) that alternately repeats, at a predetermined cycle, application of a DC pulse train by
10 using the third electrode and at least one of the first electrode and the second electrode, and application of the alternating current by using the first electrode and the second electrode.
