ABSTRACT

5 The present invention concerns apparatus having a
voltage controlled amplifier (14) wherein the gain of the amplifier
is determined in response to the level of a control signal at an
input terminal (16). A first rate of change is used for a change of
gain from a low signal level to a higher signal level, and a second
rate of change is used for a change from a high signal level to a
lower signal level with the second rate being faster than the first
10 rate.
