

ABSTRACT

LAMP HOUSING

The present invention discloses a lamp housing containing a housing base. An interior of the housing base is a holding space in a shape of a saddle, and a bottom of the holding space is a fixing portion.
5 shape of a saddle, and a bottom of the holding space is a fixing portion. Two sides of the holding space, opposite to an upper side of the fixing portion, are extended into an inner wall at two sides of the holding space by proper depth, forming a latch portion on the inner walls at the two sides of the holding space. The fixing portion is used to dispose a light
10 source module, and at least a positioning member is locked by each latch portion. The light source module is fixed on the fixing portion by the positioning member. By the present invention, flexibility of assembling LED elements can be increased and a fixing effect of the LED elements can be improved.
