

RESIN-MOLDING DEVICE AND METHOD FOR PRODUCING RESIN MOLDED

ARTICLE

ABSTRACT

The resin-molding device according to the present invention is provided with a table that is at least partially translucent, an illumination unit capable of illuminating the table from below, a resin-material-supplying unit that supplies a resin material onto the table, an imaging unit capable of capturing an image of the resin material supplied onto the table, and a resin-molding unit that performs resin molding using the resin material supplied onto the table.
