(54) Title: FREESTANDING FURNITURE DEFINING OFFICE WITH ADJUSTABLE FOOTPRINT

(57) Abstract

A telescopingly adjustable furniture article (20) is provided for filling an office space where the footprint dimensions of the office space are not known ahead of time or are likely to be periodically changed to different sizes. The furniture article (20) includes a desk (21) having a work surface (22) with ends, a support (30) for supporting one of the ends, and a foot (37) on the other end. A storage unit or cabinet (23) having a top (41) is provided. The foot (37) adjustably rests on the top (41) so that the top (41) supports the other end of the work surface (22), and the cabinet (23) is horizontally adjustable to different locations partially under the work surface (22). A Z-bracket (45) interconnects the work surface (22) to the top (41) of the cabinet (23) to secure the relationship of the cabinet (23) and the desk (21).
