

ABSTRACT**PROCESS FOR PRODUCING A CARD HAVING A CONTACTLESS FUNCTION AND/OR A
CONTACT FUNCTION**

5

Process for producing a portable object, characterized in that it comprises at least the following steps:

- a) providing a substrate (1) located in the portable object provided with one or more cavities, said substrate (1) comprising one or more connection pads
10 (3) that are connected to one or more electrically conductive tracks, at the ends of which one or more integrated circuits (5) are connected;
- b) providing an electrically conductive element (14);
- c) substantially matching the size and the geometry of a cavity (13) to the dimensions of an electrically conductive element (14), at least a portion of the
15 cavity being arranged directly above one or more connection pads (3);
- d) using an electrically conductive means (15) to connect the electrically conductive element (14) via a first face at least to the connection pads of the substrate.
