

[図1]

[図2]

The diagram illustrates a multi-step process for creating a porous body. It begins with a container 52, which is then transformed into container 61. A dashed box labeled 60 encompasses the subsequent steps: pouring material 62 into container 61 to form 63, pouring material 64 into container 63 to form 65, and finally, the resulting porous body 70. The porous body 70 is shown as a rectangular block with a grid of circular pores.
