

**TITLE OF INVENTION: PESTICIDE TECHNICAL MATERIAL OR PARENT
DRUG AND PREPARATION METHOD THEREFOR AND USE THEREOF**

ABSTRACT

A pesticide technical material or parent drug and preparation method therefor and use thereof. The technical material or parent drug contains at least two 1-N glycosidic streptolidine-2-amino-(L-lysyl) n -L-lysine-2-deoxygulosamines. Based on the total mass of the technical material or parent drug, the total content of the 1-N glycosidic streptolidine-2-amino-(L-lysyl) n -L-lysine-2-deoxygulosamines is 70% or more, where n represents the number of L-lysyl, and the value of n is any integer from 0 to 4. The pesticide technical material or parent drug with a higher content of 1-N glycosidic streptolidine-2-amino-(L-lysyl) n -L-lysine-2-deoxygulosamines has better effects than technical materials or parent drugs with lower active ingredient content in terms of stability of active ingredients and antibacterial activity.
