(54) **Title:** METHODS AND APPARATUSES FOR RECOVERY IN AN INTRA-BS LTM PROCEDURE

Figure 6

(57) **Abstract:** Various aspects of the present disclosure relate to methods and apparatuses for both an intra-BS (base station) lower layer-Triggered Mobility (LTM) procedure and an inter-BS LTM procedure. According to an embodiment of the present disclosure, a user equipment (UE) includes at least one memory and at least one processor coupled to the at least one memory and configured to cause the UE to: receive, from a source cell, lower layer-triggered mobility (LTM) configuration information related to one or more LTM candidate cells associated with a master cell group (MCG); initiate a radio resource control (RRC) reestablishment procedure based on a failure event and perform a cell selection procedure; and determine whether a cell selected by the cell selection procedure is an LTM candidate cell within the one or more LTM candidate cells.
