

ANTIBACTERIAL COMPOSITION AND ANTIBACTERIAL DRUG

ABSTRACT

An antibacterial composition and an antibacterial drug. The antibacterial
5 composition comprises cephalosporin and zidebactam, wherein cephalosporin
comprises at least one of ceftobiprole and a ceftobiprole derivative; and
cephalosporin is calculated on the basis of $C_{20}H_{22}N_8O_6S_2$, and the mass ratio of
the cephalosporin to zidebactam is 0.1:1 to 10:1. The compounding of
cephalosporin and zidebactam enables cephalosporin and zidebactam to exhibit a
10 synergistic effect, thereby providing the antibacterial composition with an
excellent antibacterial activity, and a good antibacterial activity on bacteria
resistant to the single drug of cephalosporin or zidebactam.
