

ABSTRACT

An information processing method according to one aspect includes:
acquiring a patient ID for identifying a patient, the patient's attributes, and the
patient's answers to medical questions; acquiring a doctor ID for identifying a doctor;
5 transmitting the patient ID, the attributes, and the answers of the patient to a doctor
terminal device (3) corresponding to the acquired doctor ID; receiving an input of
medical examination data for the patient through the doctor terminal device (3) on
which the patient ID, the attributes, and the answers of the patient are displayed;
receiving a request to transmit medical data including the patient's attributes and
10 answers and the input medical examination data; outputting a hash value of the
medical data to a blockchain system (2); receiving a request for disclosure of the
medical data; and outputting the medical data to a researcher terminal device (5)
when the patient's approval for the disclosure request from the researcher is obtained.
