

## 【Abstract】

The present invention relates to a method and a system for ordering a dental prosthesis. The method for ordering a dental prosthesis according to the present invention may comprise the steps of: providing a user terminal with a prosthesis ordering page including dental information corresponding to multiple teeth; receiving a user input for specifying at least one of the multiple teeth from the user terminal; in response to the user input, displaying a graphic object including a tag corresponding to one of multiple prosthesis types around dental information corresponding to a specific tooth; while the graphic object including the tag is being displayed, receiving a prosthesis order request for treatment of the specific tooth from the user terminal; on the basis of receiving the prosthesis order request, generating prosthesis manufacturing information by linking the specific tooth, prosthesis information corresponding to the tag, and patient information.
