

On-line package printing system

Abstract

The invention relates to an on-line package printing system, in particular for printing cigarette packets and cartons, whereby the packets (1) are printed by means of print head technology, and at least two print heads (7a, 7b) are provided as a means of providing an imprint as well as at least one control system for activating and deploying them. It further relates to an on-line package printing method, in particular for printing cigarette packets and cartons, whereby the packets (1) are printed by means of print head technology and whereby an imprint can be applied by at least two print heads (7a, 7b), and either one print head is deployed or several print heads (7a, 7b) simultaneously.
