

FACIAL IMAGE DATA COLLECTION METHOD, APPARATUS, TERMINAL DEVICE AND STORAGE MEDIUM

ABSTRACT

This application discloses a facial image data collection method, apparatus, terminal device and storage medium. The facial image data collection method includes: crawling an original image from a network by using an image crawler tool; recognizing the original image to obtain an effective image containing face features by using a face recognition algorithm; and cutting out a target facial image from the effective image by using a preset selection box. The facial image data collection method can quickly collect a large amount of facial images.
