EMULSION FORMULATION AND METHOD FOR PREPARING THE SAME

Abstract

This invention provides a water-in-oil (w/o) emulsion formulation that stably contains 3 types of peptides having 4 linked CTL epitopes. This invention also provides a method for efficiently preparing the w/o emulsion formulation containing 3 types of peptides having 4 linked CTL epitopes. This invention provides a w/o emulsion formulation that stably contains 3 types of peptides having 4 linked CTL epitopes and a method for efficiently preparing such w/o emulsion formulation. In addition, this invention provides an improved method and an apparatus to prepare such emulsion formulation.
