

ABSTRACT

To provide an information processing apparatus and a display control program that each determine a risk level of data owned by the apparatus based on information obtained from plural sensors included in the apparatus, an information processing apparatus 1 includes situation determining means 102 for determining a situation of the information processing apparatus 1 based on information obtained from an acceleration sensor 12 and a voice sensor 13; risk level determining means 103 for determining a risk level based on a change with time of the situation; display range limiting means 104 for limiting a display range of document information 111 in accordance with the risk level determined by the risk level determining means 103; and displaying means 105 for displaying the document information 111 for the display range limited by the display range limiting means 104.
