(54) Title: **FINDING OBJECTS IN AN IMAGE**

(57) Abstract: A method for finding a predefined object in an image includes selecting a line belonging to the object, the line having a known stroke width and defining a maximum width (56) and a minimum width (58) that together define a range of widths (60) therebetween that contains the stroke width. A feature in the image is found having a feature width within the range, and the feature is processed to determine whether it is a part of the object.
