(54) Title: SCREEN REFRESH METHOD

(57) Abstract: A system and method for integrating multiple refresh functions inline with a visible refresh button control is provided. When a user wants to change a type of refresh mode due to the type of work being performed, a user selects the refresh setup drop down arrow key. A user has a refresh mode selection of manual, manual override, or auto mode. A user also has a preferences area to set screen refresh trigger thresholds for manual override and auto mode. For example, a user can set a trigger to wait until a task is completed before performing a screen refresh. A user is able to manually perform a screen refresh in override and auto mode by pressing the refresh button. Further disclosed are an information handling system and a computer program product each providing multiple refresh mode functionality.
