COMMUNICATION APPARATUS AND COMMUNICATION METHOD FOR PREAMBLE OF ALIGNED PPDUS

ABSTRACT

Communication devices and methods for preamble of aligned PPDUs are provided. One exemplary embodiment provides a first communication apparatus comprising: circuitry, which in operation, generates a first Physical Protocol Data Unit (PPDU) that is aligned with a second PPDU, wherein one or more fields of the first PPDU include one or more symbols having parameters that are different from that of one another; and a first transmitter, which in operation, transmits the first PPDU to a second communication apparatus.
