Figure 2

- (57) **Abstract:** A gully assembly configured for use with like gully assemblies to form part of a horticultural moving gully system, the assembly comprising: (a) an elongate crop holder having spaced apart openings for receiving respective crops to be grown and harvested; and (b) a channel in which water can flow over roots of the spaced apart crops; wherein the assembly is configured to enable adjustment of a distance between the spaced apart openings such that crop density can be varied during a crop growing process.
