
Subcutaneous injections of HT29 or Caco-2 colon cancer cells in nude mice
First I.P. Injection of saline alone (gr 1) or Foxy-5 (2µg/g; gr 2) starts after tumours have been established in the mice
+ 8 I.P. injections every 2nd day of either saline alone (gr 1) or Foxy-5 (2µg/g; gr 2)
Monitoring tumor growth and animal weight
End of the experiment: analyses of the tumours by IHC, mRNA and ELIZA
