

ABSTRACT
ACCESS CONTROL METHOD, ACCESS CONTROL
APPARATUS, SYSTEM, AND STORAGE MEDIUM

An access control method, an access control apparatus, a system, and a storage medium are provided. The method includes: acquiring a scene image, and recognizing one or more face images in the scene image; determining an attribute of the face image, the attribute including a registered user and an unregistered user; and if multiple face images are recognized, determining whether attributes corresponding to the multiple face images include the registered user, and responsive to determining that the attributes corresponding to the multiple face images comprise the registered user, controlling an access control device to be opened; responsive to determining that the attributes corresponding to the multiple face images does not comprise the registered user, in condition that an access control verification request instruction is received and verification for the access control verification request instruction succeeds, controlling the access control device to be opened.
