

ABSTRACT OF THE DISCLOSURE

METHOD FOR OPERATING AN AIR-TO-AIR MISSILE AND CORRESPONDING MISSILE WITH AUTONOMOUS OR SEMI-AUTONOMOUS MODES

A method for operating a short range, air-to-air missile carried by an aircraft flown by a pilot. The missile includes a seeker operative to track a target. The method comprises providing a first indication to the pilot when the seeker is tracking a target, providing a second indication to the pilot when a rate of angular motion of the seeker falls below a given value for a predefined period.
