

【ABSTRACT】

A washing machine comprises: a cabinet having a first opening and a washing space formed therein; and a door assembly provided to open and close the first opening,
5 wherein the door assembly comprises: a door body having a second opening and corresponding to the first opening and provided to rotate relative to the cabinet; door glass having a glass hole communicating with the inside of the cabinet and coupled with the rear surface of the door body; a guide duct that connects the second opening and the glass hole; and a sealing member. The sealing member can prevent washing
10 water or internal air from escaping from the door assembly.
