MULATIONS PACKAGED THEREIN

FIG.5

(57) **Abstract:** The present invention relates to a pharmaceutical package comprising a plastic container and an aqueous formulations of nerve growth factor (NGF), in which at least the surface of the container in contact with the NGF aqueous formulation is made of particular polypropylenes (PPs), characterized by certain thermal properties and crystallinity. Advantageously said containers show a NGF adhesion significantly lower than that of siliconized glass or of other polypropylenes. It is thus possible to store aqueous formulations of NGF in less severe conditions, avoiding additional coating treatments to the containers and additives while keeping the NGF titer constant.
