(54) **Title:** IMPROVED FRET-PROBES AND USE THEREOF

Figure 3

(57) **Abstract:** This invention relates to the detection of among others tumor-specific fusion proteins and protein interactions. Provided is a set of at least a first and a second molecular probe, each probe provided with a dye wherein said dyes together allow energy transfer, each probe additionally provided with a reactive group allowing juxtaposing said at least first and second probe, wherein said reactive group is an oligonucleotide and wherein the reactive group of said first probe is not directly reactive with the reactive group of said second probe.
