

ABSTRACT

This application provides an interaction processing method and apparatus for a virtual scene, an electronic device, a computer-readable storage medium, and a computer program product. The method includes: displaying a virtual scene, the virtual scene including a first account and a second account that participate in interaction; displaying at least one first cell and at least one second cell in the virtual scene, the first cell being configured for the first account to place at least one first virtual object, to interact with at least one second virtual object placed in the second cell by the second account; and updating, in response to an end of each round of interaction, a quantity of cells included in the virtual scene.
