

## STENT

### ABSTRACT

The disclosure provides a stent including: an annular first strut forming a wave shape; an annular second strut that is adjacent to the first strut in the axial direction and forms a wave shape; a first extension portion that is formed on a first crest as some of plural crests protruding toward the second strut in the first strut and extends from both sides with respect to a bisector of the first crest toward the second strut; a second extension portion that is formed on a second crest, which is located to be shifted in a circumferential direction with respect to the first crest among plural crests protruding toward the first strut side in the second strut, and extends from both sides with respect to a bisector of the second crest toward the first strut; and a bridge portion bridged between the first extension portion and the second extension portion.
