ABSTRACT

COMMUNICATIONS SYSTEM, COMMUNICATIONS DEVICE, AND
COMMUNICATIONS METHOD

A communications system includes a memory storing a table
in which information identifying each server is associated with
5 information identifying a plurality of switching devices, a
communication incapability detector for detecting that a given
switching device cannot relay data destined for a given server
transmitted from a mobile terminal to the given server, a
selector for selecting, based on the detection, a switching
10 device other than the given switching device from among a
plurality of switching devices associated with the given server,
by referring to the table and information identifying the given
server, and a transmitter for transmitting data to the selected
switching device.
