(54) Title: COMBINATION THERAPY FOR TREATMENT OF CANCER

FIG. 1

(57) **Abstract:** Mutations in oncogenes and tumor suppressors contribute to the development and progression of cancer. The present disclosure describes methods of recovering wild-type function to p53 mutants by treating a cancer with a compound and a second agent. The compounds of the present invention can bind to mutant p53 and restore the ability of the p53 mutant to bind DNA and activate downstream effectors involved in tumor suppression. The disclosed compounds can be used in combination with a secondary agent to reduce the progression of cancers that contain a p53 mutation.
