(54) Title: PROVISION OF DATA FROM A SERVICE PROVIDER NETWORK

FIG. 3

(57) Abstract: A method for providing subscriber data from a first service provider network to a content provider external to the service provider network comprises receiving a first network identifier sent from a subscriber device that is authenticated to communicate over the first service provider network, wherein the first network identifier is sent by the subscriber device in a first message to an entity outside of the service provider network; receiving a second network identifier sent from the subscriber device to the first service provider network; performing a verification process using the first network identifier and the second network identifier to verify whether it is permissible for subscriber data stored at the service provider network to be provided to the content provider external to the service provider network. In response to the verification process being successful, the subscriber data is provided to an entity that is external to the service provider network.
