(54) Title: THERMOSENSITIVE NANOPARTICLE FORMULATIONS AND METHOD OF MAKING THE SAME

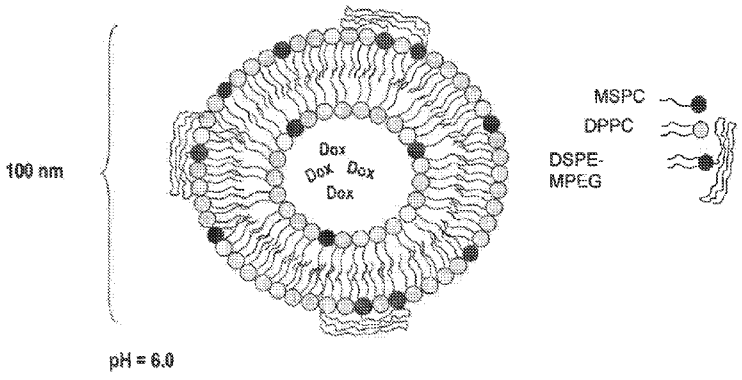

FIG. 1

(57) Abstract: The present invention relates to a formulation of thertnosensiiive liposomes, and more specifically to a formulation of liposomes comprising phospholipids and a surface active agent, wherein the liposomes support long term storage at temperatures less than or equal to about 8 °C, control degradate formation to maximize product potency and release their contents at mild hyperthermic temperatures. Methods of making formulations are also described.
