(54) Title: OPHTHALMIC LENSES

Fig. 1

(57) Abstract: An ophthalmic lens for use in preventing or slowing the development or progression of myopia. The lens has a first optical axis. A first surface of the lens is shaped to form a first surface power map. A second surface of the lens is shaped to form a second surface power map. The first and second surface power maps together form a lens power map. One of the first surface power map, the second surface power map, and the lens power map comprises: a base region and a myopia control region. The base region has a base power which focusses light to a focal point that is on the first optical axis. The myopia control region comprises a spiral shape and focusses light to a plurality of focal points that are offset from the first optical axis. Also a method of manufacturing such an ophthalmic lens.
