(54) Title: METHOD AND SYSTEM FOR MANUFACTURING LAMP TILES

(57) Abstract

A method and system for fabricating lamp tiles (601) which include a molded body and a plurality of electrically conductive leads protruding therefrom. The lamp tiles are made by overlaying an anode lead frame (201) having anode leads (211), on a cathode lead frame (101) having cathode leads (117), and then depositing molding material on intersected anode (211) and cathode leads (117). The lamp tiles are manufactured in an assembly line (301) process which includes a feeder (307) to feed the anode and cathode lead frames and a molder (309) to deposit the molding material.
