(54) Title: METHOD OF AND SYSTEM FOR GENERATING AN AUTHORIZED DOMAIN

162162

ACTION

(57) Abstract: This invention relates to a system and a method of generating an Authorized Domain (AD)), the method comprising the steps of selecting a domain identifier (Domain ID) uniquely identifying the Authorized Domain, binding at least one user (P1, P2, ..., PN_1) to the domain identifier (Domain ID), and binding at least one device (D1, D2, ... DM) to at least one user (P1, P2, ..., PN1), thereby obtaining a number of devices (D1, D2, ... DM) and a number of users (P1, P2, ..., PN1) that is authorized to access a content item (C1, C2, CN_2) of said Authorized Domain (100). Hereby, a number of verified devices (D1, D2, ..., DM) and a number of verified persons (P1, P2, ..., PN1) that is authorized to access a content item of said Authorized Domain (100) is obtained. Additionally, it is possible to enable automatic assignment of imported content being imported on a device belonging to the Authorized Domain (AD) since it now is given to which person a given authorized device belongs to. Further, a simple and efficient way of implementing domain boundaries is enabled.
