

CORDLESS TELEPHONE SYSTEM

ABSTRACT

In order to provide a telephone system for enabling a transfer of CLI data, such as the telephone number of a caller, from a main terminal (11) to a remote handset terminal (A, B, C), the main terminal (11) stores in a memory (25) CLI data that is to be transmitted with a call signal. When a request for position registration is received from a remote handset terminal (A, B, C), the main terminal (11) transmits the stored CLI data to the remote handset terminal (A, B, C).
