(54) Title: COEFFICIENT CODING FOR SUPPORT OF DIFFERENT COLOR FORMATS IN VIDEO CODING

(57) Abstract: A method of decoding video data comprises determining, based on a color format of a picture of the video data, which context model from among a first context model and a second context model to use to determine a context increment for a syntax element that indicates a prefix of an x or y coordinate of a last significant transform coefficient of a color component of a block of the picture; and decoding a bin of the syntax element by applying Context Adaptive Binary Arithmetic Coding (CAB AC) using a context determined based on the context increment for the syntax element.
